

AKSHITH BHARADWAJ DORNIPADU

Computer Science Student — Software Engineer (SDE)

dornipaduakshith@gmail.com | +91 93478 79474 | github.com/ak-bharadwaj | linkedin.com/in/akshith-bharadwaj | leetcode.com/akshith_bharadwaj | Nandyal 518501, AP, India

PROFESSIONAL SUMMARY

Final-year CS student with a strong foundation in data structures, algorithms, and system design, gained through building and deploying real systems — a live four-portal SaaS platform, a disaster-response decision system (paper in preparation for IEEE INDICON 2026), and a deterministic runtime for AI coding agents. Comfortable across Python, FastAPI, PostgreSQL, and Next.js.

EDUCATION

B.Tech, Computer Science and Engineering — Rajeev Gandhi Memorial College of Engineering and Technology
Expected Apr 2027 | CGPA: 8.2/10

SKILLS

- **Core:** Data Structures & Algorithms (DSA), OOP, Git, C, JavaScript, HTML5
- **Backend:** Python, FastAPI, REST APIs, PostgreSQL, Supabase, Neon, SQL, System Design
- **AI/ML & Agents:** Machine Learning, scikit-learn, TensorFlow, Multi-Agent Systems, Transfer Learning, Finite-State Machines
- **Familiar with:** Docker, CI/CD pipelines

PROJECTS

AMIS-RU — Multi-Hazard Disaster Response System with Execution Governance Layer

Python, FastAPI, Next.js, Multi-Agent Systems | *Paper in preparation for IEEE INDICON 2026* | [GitHub](#)

- Designed an Execution Governance Layer (EGL) — a regret-based decision gate that determines whether dispatch actions should execute, wait, or escalate to a human commander — implemented with an append-only, checksum-verified audit trail.
- Modeled seismic, cyclone, wildfire, and flood hazards using published physical models and Bayesian belief updates, validated the system across 120 runs in 4 historical scenarios, reducing responder stall events by 82–86% versus ungoverned baselines.

S-Class EOS — Deterministic Runtime for AI Coding Agents

Python, Finite-State Machines, Multi-Agent Orchestration | [GitHub](#)

- Built a 19-state FSM kernel that mitigates hallucination-driven coding-agent actions by enforcing specification verification and automated testing, marking tasks complete only after passing tests — not on self-reported status.
- Designed an 8-subagent concurrent dispatch system with a modular 118-skill catalog for frontend, backend, QA, and database workflows, backed by 159 automated unit and integration tests.

EXPERIENCE

Freelance Web Developer — Sri Guru Driving Academy, Nandyal (May 2026 – Jul 2026)

- Designed and deployed a four-portal SaaS platform (Next.js, Prisma, Neon, PostgreSQL) covering a 47-topic driving curriculum, an RTO mock-test module, and lead capture — live and actively used by the business. [Live site](#)

AI/ML Intern — SmartBridge (Remote) (May 2025 – Jul 2025)

- Built HematoVision, a transfer-learning (MobileNetV2) blood-cell classifier reaching ~95% validation accuracy on WBC/RBC/platelet images, served via a Flask + TensorFlow web app. [GitHub](#)

CERTIFICATIONS

Google Cloud Generative AI Virtual Internship (SmartBridge) • Meta Full Stack Developer (Coursera) • Oracle Certified Generative AI Professional • DataCamp Certified SQL Associate

ACHIEVEMENTS

- **TCS CodeVita Season 13** — Global Rank **5360**, Round 2 qualifier
- **2nd Place** — Hack2Skill × Google Developer Groups (GDG) Vibe-Coding Hackathon in RGM CET, 2nd among **600+** participants
- **Top 10 Finalist**, National Hackathon (SmartBoxTrack), among **40+** colleges
- **Hackathon Lead & Organizer** — **RGM College:** Led teams across college/national hackathons; built the Concurrence 2K26 registration platform for **400+** participants and the **JNTUA Inter-College Sports Meet** platform providing live scoreboards and event information.
